

Satellite radio is one of the best advances in years for the listening public. We travel a great deal and satellite radio has been a God send. In our motor home, there are many places that AM/FM radio can not reach when satellite does. This can and has been a great safety factor when it comes to weather, and emergency events that effect our location or destination. It is also one of our greatest pleasures to have vertualy NO ADVERTISING. An example of AM/FM/TV is the ever growing advertising, which at the current rate will leave us 5-10 minutes per half hour of actual program. NAB members have pushed us to the point where we very seldom listen to them any more.

This a clear case of satellite radio exercising their contitutional rights. I can't imagine that NAB could even think of their petition 04-160, much less that our government would consider supporting such an outrageous attach on the freedoms of our constitutional rights.

I, as an American citizen am expressing my STRONG OBJECTION TO NAB'S PETITION 04-160.
